PHILADELPHIA 2035

>ZONING APPENDIX
Land Use and Zoning

Purpose of the Zoning Appendix

This document serves as a supplement to the proposed zoning remappings found in the Central District Plan. To better assist the public in understanding the location and intentions of all proposed zoning remappings, all zoning recommendations have been located and the reason for proposing them have been stated. Proposed zoning changes have been shown in neighborhood plans so that they can be seen by street and by block. Proposed Transit Oriented Development (TOD) zoning overlays have also been detailed, with primary and secondary streets shown in conformance with the conditions described in the recently adopted zoning code.

What Is Land Use?

Planners categorize and map land use to document and understand the current state of development. Land use refers to broad categories such as residential, commercial, or industrial and can be broken out into more detail such as high density residential, office commercial, or warehousing/distribution. Maps can help planners identify potential uses that, if developed, could enhance the quality of life or economic productivity of an area. Intensity or type of land use also impacts infrastructure needs such transit or utilities. Most importantly, land use impacts development regulations such as zoning.

What Is Zoning?

Zoning is the primary tool for regulating land use. Zoning is a set of regulations governing land development and permitted uses for property. These laws regulate what type of uses can occur (use), where buildings can be located on a property (area), and the size of the building (bulk). Existing properties may not conform with zoning regulations if they have received a variance for their use, area, or bulk, or if they legally existed prior to the zoning laws being enacted.

Adoption of the New Zoning Code

In August 2012 the revised code took effect, following a four-year process to create the first comprehensive rewrite of the Philadelphia Zoning Code in 50 years. The new zoning code is better organized and easier to navigate. The purpose of the zoning code is to set clear rules and expectations about land use, preserve neighborhood character, protect open space, and encourage investment and jobs.

The zoning code rewrite was the first part of the integrated zoning and planning process: the other major part is the zoning map revision process. The district plans are key to the zoning map revision process by providing land use and zoning recommendations. These land use and zoning recommendations ensure that the new code is properly mapped to reflect both existing and future land use needs. This thereby reduces the number of developments requiring relief from the Zoning Board of Adjustment.

Zoning Map Revision Process

When analyzed together, land use and zoning inform planners if a property or area is zoned correctly for current conditions or if zoning changes are necessary to either reflect existing conditions or bring about changes to future physical development. Over time, changes in land use may require a remapping, or a change to a property’s zoning district classification, as shown on the official zoning map. Zoning map revision is a public process for updating and revising the zoning in an area and requires an action by City Council.
Proposed Zoning

The zoning of a parcel is analyzed to ensure that it can implement the desired future land use. Zoning is the primary tool to regulate land use (use), where a building can locate on the property (area), and building size (bulk). The zoning in most of the district will remain as-is since many of the uses are appropriate and should continue into the future. In some areas, the zoning does not match the existing and future land use and, therefore, requires Corrective Zoning. Other areas are targeted for long-term transition to new uses and development as envisioned by the community through the planning process. These zoning revisions are referred to as Zoning to Advance the Plan. Places where a zoning change is proposed are called out and detailed on the next pages.

Corrective Zoning

Matches zoning with existing land use.

These are areas where the mismatch may cause unnecessary zoning variances or certificates, or allow an inappropriate use.

Zoning to Advance the Plan

Encourages new development and uses envisioned by the community through the planning process.

These are areas where revisions to the zoning code will enable development as recommended by this plan. These recommendations are based on the Future Land Use map of the Central District Plan (p. 86), not what exists today.

Zoning in the Central District is unique, allowing for most dense, mixed-use development opportunities. The existing zoning of the Central District is generally consistent with the existing land use. With large swathes of the Central District zoned for commercial mixed uses at high densities (CMX-4 and CMX-5), a wide-range of residential, commercial, institutional, and cultural uses are permitted. CMX-4 and CMX-5 are the highest density, mixed-use zoning classification in the Zoning Code and are perfectly suited for high-rise development in Philadelphia’s “downtown.” These designations often cover full-city blocks and often permit more dense development than what currently exists.

The zoning also created Center City’s elegant transition to mid-rise and low-rise development in surrounding neighborhoods with spines of higher density zoning designations along Broad Street, Market Street and John F. Kennedy Boulevard. However, as the zoning classifications become more fine-grained and less permissive outside the core, zoning and land use do not align as well. Recurrent areas of mismatch in the Central District neighborhoods include single-family use areas zoned to allow multifamily, open space and recreation uses zoned incorrectly, and a variety of commercial and residential uses zoned industrial. Specific zoning recommendations are outlined in the “Making It Happen” section of this plan and the Zoning Appendix.
Proposed Land Use

The Central District is forecast to see moderate growth over the next 10 years. These proposed changes to the land use of the district take into account not only places that are stable, such as the residential neighborhoods and some commercial areas, but also where growth should and can be accommodated. Taking into account the recommendations from the Citywide Vision as well as previously existing plans and community feedback, this proposal looks to distribute density around areas of concentrated transit access, capital facilities, and cultural amenities.

Existing Land Use Map Legend

* The Transportation percentage does not include streets and sidewalks, which cover a total of 928 acres.
Proposed Zoning

The zoning of a parcel is analyzed to ensure that it can implement the desired future land use. Many of the proposed zoning changes outlined on the following pages can fall into several categories:

Industrial Zoning — Currently, many areas of the Central District are zoned to allow industrial uses, but are transitioning to other uses, such as residential or commercial. Along the Delaware waterfront, the former Callowhill Industrial District and the western end of Washington Avenue are all seeing new uses mix in with the remaining industrial businesses. The new zoning in these areas will further help the transition, while preserving locations for light industry that serves the district.

Commercial Corridors — Several commercial corridors can benefit from higher densities. The influx of additional residents along these corridors will help support commercial ventures and strengthen the mix of uses of the area.

Transit-Oriented Development Overlays — The new zoning code allows for overlays around transit centers to increase density and support multimodal transportation. Several key subway and El stops in the Central District would benefit from additional development around these transportation nodes.

Transit-Oriented Development (TOD) Overlays

Reasons for Applying TOD Overlays

As described in the Citywide Vision, Transit-Oriented Development (TOD) is defined as:

“Mixed-use development, including residential, commercial, and institutional uses, centered at transit stations to maximize access to and ridership of public transportation. TOD generally encourages higher density and reduced parking requirements.” Philadelphia2035, Citywide Vision (1.1.3.a)

With its multitude of bus, regional rail, subway, and trolley lines, the Central District offers numerous opportunities to leverage transit for development. Specific provisions in the zoning code (see left panel) allow the creation of a TOD overlay district, which provides incentives for increasing density, affordable housing, and parking reductions.

However, even with its multitude of transit opportunities, not all areas of the Central District are suitable for a TOD zoning overlay. Within the commercial corridors of Center City, the high densities and low parking ratios already allowed within the existing CMX-4 and CMX-5 zoning districts exceed any benefits that could be gained from a TOD overlay. In other outlying neighborhoods, additional density incentives may not always be desirable or necessary due to the moderate scales of the existing blocks that have low vacancies and few remaining open lots.

The areas highlighted in the map below represent some of the best opportunities for TOD development, where ready access to rail transit complements adjacent growth, and numerous soft sites (a combination of open lots, obsolete uses, and/or aging low-density building stock ripe for new construction). These can create opportunities for higher-density development that relies on fewer parking spaces, as well as encouraging the development of affordable housing units. Due to available lot sizes, ownership patterns, and recent growth, there are few locations left in the Central District that may be able to support affordable housing. As a result, these TOD overlays may be among the few remaining opportunities for creating affordable housing at key locations.

The Benefits of TOD Overlays in the Zoning Code

All Properties:
Minimum parking requirements are reduced by 50%

CMX-3 Zoned Properties:
Affordable Housing: Density Bonus
Up to 150% FAR increase

Green Building: Density Bonus
Up to 100% FAR increase
